

28, 23,

(23)

a)  $m = \frac{4}{1} \Rightarrow$   $\left. \begin{matrix} (-5, 1) \\ (-4, 5) \\ (-3, 9) \\ (-2, 13) \end{matrix} \right\} \Delta y = 4$   
 $\Delta x = 1$

c)  $m = -\frac{1}{3} = \frac{\Delta y}{\Delta x} \cdot \left. \begin{matrix} (-5, 1) \\ (-2, 0) \end{matrix} \right\} \Delta y = -1$   
 $(1, -1)$   
 $(4, -2)$

28.

$$m = \frac{\text{rise}}{\text{run}} = \frac{36}{18} = \frac{2}{1}$$

$$m = \frac{12}{18} = \frac{2}{3}$$

## 6.2 Perpendicular and Parallel Lines

\* Parallel lines have the same **slope**

ex. Determine which line segments are parallel

- EF passes through E(-4, -3) and F(0, 3)
- PQ passes through P(-3, -5) and Q(2, 3)
- RS passes through R(0, -3) and S(4, 3)

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\begin{aligned} m_{EF} &= \frac{3 - (-3)}{0 - (-4)} \\ &= \frac{6}{4} \\ &= \frac{3}{2} \end{aligned}$$

$$\begin{aligned} m_{PQ} &= \frac{3 - (-5)}{2 - (-3)} \\ &= \frac{8}{5} \end{aligned}$$

$$\begin{aligned} m_{RS} &= \frac{3 - (-3)}{4 - 0} \\ &= \frac{6}{4} \\ &= \frac{3}{2} \end{aligned}$$

∴  $\overline{EF}$  and  $\overline{RS}$  are parallel

\* What is the relationship between two perpendicular lines? Draw two sets of perpendicular lines... what do you notice? ↖ meet @ 90°

ex.

$$m_{AB} = \frac{2}{3}$$

$$m_{CD} = -\frac{3}{2}$$

\* Perpendicular lines have slopes that are **negative reciprocals**

ex.  $m = \frac{-3}{5}$

$$m_{\perp} = \frac{1}{3}$$

ex//  $m = \frac{1}{5}$

$$\begin{aligned} m_{\perp} &= -\left(\frac{5}{1}\right) \\ &= -5 \end{aligned}$$

ex//  $m = -\frac{3}{7}$

$$\begin{aligned} m_{\perp} &= -\left(\frac{7}{-3}\right) \\ &= \frac{7}{3} \end{aligned}$$

ex. Determine the slope of a line that is perpendicular to a line that passes through A(-2, 3) and B(1, -2), the equation for slope is

$$\begin{aligned}
 m_{AB} &= \frac{y_2 - y_1}{x_2 - x_1} \\
 &= \frac{-2 - 3}{1 - (-2)} \\
 &= \frac{-5}{3}
 \end{aligned}$$

$$\therefore m_{\perp} = \frac{3}{5}$$

means perpendicular

ex. Is ABCD a parallelogram? Justify your answer.

$$\begin{aligned}
 m_{AB} &= \frac{2}{8} = \frac{1}{4} \\
 m_{DC} &= \frac{2}{8} = \frac{1}{4}
 \end{aligned}$$

$\therefore m_{AB} \parallel m_{DC}$   
means parallel

$$\begin{aligned}
 m_{AD} &= \frac{-4}{1} = -4 \\
 m_{BC} &= \frac{-4}{1} = -4
 \end{aligned}$$

$\therefore m_{AD} \parallel m_{BC}$

$\therefore$  ABCD is a parallelogram
